OBJECTIVE: To establish myself with motivating, competitive and learning environment.

- EXPERIENCE:**
- **Data Scientist - Jazz, Islamabad Pakistan** Feb 2017 - Present
 - Worked on machine learning models for Customer value management, using Logistic regression, fully connected neural network.
 - Developed Churn Prediction algorithm to predict customer likely to leave for another service.
 - Worked on Distributed processing on Hadoop cluster.
 - **Technologies:** TensorFlow, Sckit-learn, Jupyter and Python, Pyspark, Spark, Hive, Tableau
 - **Application Engineer - LMKR, Islamabad Pakistan** June 2016 – Feb 2017
 - Worked on Volume visualisation and interpretation of underground seismic data, in scrum team.
 - Manipulating imagery using GPU, on the user demand.
 - **Technologies:** C#, WPF, MVVM
 - **Internee - Code For Pakistan, Islamabad Pakistan** June 2015 - Aug 2015
Worked on civic app for locating nearest doctors.
 - **Teacher Assistant - FAST NUCES, Islamabad Pakistan** Sep 2013 – Dec 2013
Review assignments and quizzes of Linear Algebra.
- EDUCATION:** **National University of Computer and Emerging Sciences FAST, Islamabad Pakistan** July 2016
BS(Computer Science) - CGPA: 3.83

Majors:

- Concurrent & Distributed Systems
- Digital Image Processing
- Data ware Housing
- Artificial Intelligence
- Data Mining

DEEP LEARNING PROJECTS:

Intelligent Image Searching

Identifying photos of a particular person and
Identifying Indoor, outdoor, night, day photos,
Classifiers:
- Support Vector Machine
- Softmax Classifier
- Convolutional Neural Network (CNN).
Languages: Python, Caffe

Music Generation

Generating music given corpus of jazz music
By training algorithm that learns musical patterns.
Classifiers:
- Long short term memory (LSTM)
Languages: Python, Keras

Dinosaur Names Generation

Character level language model
Generates unique dinosaur names given dataset.
Classifiers:
- Recurrent neural network (RNN)
- Long short term memory (LSTM)
Languages: Python, Keras

Emojifier

Suggesting appropriate emoji for a sentence using word
embeddings.
Classifiers:
- Long short term memory (LSTM)
Languages: Python, Keras

Date Format Translation

Translating dates from human readable to machine readable
format.
Neural machine translation with attention mechanism
Classifiers:
- Long short term memory (LSTM)
Languages: Python, Keras

OTHER PROJECTS:

Product Classification (Data Mining)

- Kaggle Competition (Otto Production Classification Challenge)
- Classifying Product in one of 9 categories.
- Using Support Vector Machine, Logistic Regression
Languages: Python
Tools: Ipython notebook

Sentiment Analysis (Data Mining)

- Kaggle Competition (Bag of words meet bag of popcorn)
- Classifying Book Reviews as either positive or negative.
Languages: Python
Tools: Ipython notebook

Attendance Recognition System (Digital Image Processing)

To Automatic Sheet Recognition System which recognises the student's number of absents and presents from scanned copies of attendance sheet.
Languages: Matlab
Tools: Matlab

Password Cracker (Concurrent and Distributed Systems)

Cracking Password over network on Concurrent and Distributed Systems
Language: Go

CERTIFICATION

Sequence Models by deeplearning.ai on Coursera.
<https://www.coursera.org/account/accomplishments/certificate/DH7CA9WFSGMJ>

HONORS & AWARDS:

- Winner of Telenor Appportunity (App competition) in Health Category.
- Magna Cum Laude Award in BS Computer Science Degree.
- Awarded Silver Medal in BS Computer Science Degree.
- Awarded Gold Medal in 5th, 6th, and 8th semester in BS Computer Science Degree.
- Awarded Silver Medal in 7th semester in BS Computer Science Degree.
- Name in Dean's List in all semesters in BS Computer Science Degree.

ACTIVITIES:

- Completed Online Courses Edx.org, Coursera.
- Took Udacity course: From Machine learning to Deep learning.
- Worked on Natural language processing using bag of words and skip gram model, Seq2Seq Model.
- Designed Alphabet recognition algorithm using convolution neural network.
- Open Source Contribution to Scikit-Learn.
